[Company's Address]

Hi [Recipient's Name],

I'm reaching out because the GEN AI Developer position at [Company's Name] caught my eye. I've been working with AI for a while now, and I'm eager to bring my experience to your team. Building and rolling out AI applications is my thing, especially when it comes to Generative AI. I see this role as a chance to push the envelope on AI innovation with you.

At Eligarf Technologies PVT LTD, I was the go-to person for AI projects as a Senior AI Annotation Engineer. I built OfficeBuddy, an internal GenAI assistant that slashed manual search time by 90%. Handling everything from MLOps pipelines with tools like MLflow, Airflow, Docker, and Kubernetes, I've honed my skills to fit exactly what you're looking for.

Some of my projects include GenAI Suggestify and GenAI AudioScribe. They show off my knack for using LLMs and diffusion models, along with vector databases such as FAISS and Pinecone. I'm hands-on with LangChain workflows and RAG systems, ensuring solid semantic search and document retrieval. My Python skills and familiarity with libraries like Hugging Face Transformers

and OpenAI APIs match your key requirements.

What really draws me to [Company's Name] is [mention any specific reason related to the company]. I'm looking forward to working with your team, bouncing ideas around, and keeping the innovation wheel turning.

Thanks for considering my application. I'm excited about the chance to contribute to [Company's Name] and would love to chat about how I can help. You can reach me at 9011779747 or drop me an email to set up a time.

Best,

Sudarshan Lakshate
